PRESS RELEASE

3A Composites AIREXBALTEKBANOVA wins Airbus qualification for its high-performance structural foam AIREX[®] R82.80

3A Composites has won qualification from Airbus for its AIREX[®] R82.80 rigid high performance core, which is well-suited for aerospace sandwich applications due to outstanding fire resistance, exceeding the most stringent flammability, smoke density, heat release, and toxic gas emission requirements such as FAR 25'853.

AIREX[®] R82.80 follows lower density R82.60 in obtaining Airbus qualification. *"We are excited to continue expanding our relationship with Airbus and delivering solutions to the aerospace industry",* said **Eric Gauthier, President of Global Key Accounts at 3A Composites Core Materials.**

AIREX[®] R82 has proven to exhibit outstanding strength and stiffness to weight ratios, high impact resistance, excellent dielectric properties, and very low moisture absorption. All of this makes AIREX[®] R82 an exceptional thermoformable core material for use in structural applications that demand lightest weight, highest fire resistance, radar transparency or operation in extremely hot or cold environments.

This demonstrates 3A Composites continuing focus on providing innovative solutions to sustainably fulfill its evolving customers' demands.

About 3A Composites Core Materials:

3A Composites Core Materials is a global organizational unit within 3A Composites, part of Schweiter Technologies (SIX Swiss Exchange: SWTQ), with operations in Europe, the Americas, India, China and Papua New Guinea, that has pioneered the sandwich technology for almost 70 years. Its AIREXBALTEKBANOVA brand provides sustainable, lightweight and resource-friendly, high-quality core materials (broadest portfolio in the industry) to enable the production of lighter and thus more energy efficient end products for the wind-turbine, marine, aerospace, and automotive industries.
