BALTEK® SB and SBC

GM--TDS-097

Select Grade Structural Balsa

new DATA SHEET 03.2023

DESCRIPTION

BALTEK® SB and SBC are core materials produced from select kiln-dried balsa wood in the 'end-grain' configuration, which make them ideal for vacuum infusion. Both have extremely high strength and stiffness to weight ratios and achieve an excellent bond with all types of resins and adhesives. They are compatible with a variety of manufacturing processes and are resistant to temperature changes, or exposure to fire, or chemicals such as styrene.

3A Composites Core Materials owns and manages several thousand hectares of FSC®-certified balsa wood plantations. Its cultivation from seedling to the tree ensures sustainable forest management and strict traceability. Own plantations enable 3A Composites to provide a continuous supply to industrial customers.

Both **BALTEK® SB and SBC** are ideal core materials for an extensive range of applications subjected to static or dynamic loads in service. All while being a renewable resource.

CHARACTERISTICS

- Ecological product
- First-class, select grade lumber
- Broadest range of available balsa densities worldwide
- Certified for a range of applications by DNV, Germanischer Lloyd, Lloyd's Register, American Bureau of Shipping and Korean Register
- Excellent fatigue and impact resistance
- Outstanding strength and stiffness to weight ratios
- Good sound and thermal insulation
- Fulfils most FST (flame, smoke, toxicity) requirements
- Extremely wide operating temperature range -212 °C to +163 °C (-414 °F to +325 °F)
- Controlled time from harvesting to kiln-drying: Optimized for vacuum infusion processes
- Full traceability and highest lumber quality due to strict process control from seedling to final product

APPLICATIONS

- **Wind energy**: Rotor blades (shear webs & shells), nacelles, spinners
- **Marine:** Hulls, decks, bulkheads, superstructures, interiors, tooling/molds
- **Road and Rail:** Floors, roofs, side skirts, front-ends, doors, interiors, covers
- **Industrial:** Tanks, containers, architectural panels, impact limiters, sporting goods
- **Aerospace:** Floors, cargo pallets, cargo containers, bulkheads, general aviation
- **Defense:** Naval vessels, containers, cargo pallets, shelters, ballistic panels

PROCESSING

- Vacuum infusion
- Adhesive bonding
- Compression molding
- Contact molding (hand/spray)
- Pre-preg processing (up to 180 °C, 355 °F)
- Resin injection (RTM)

MECHANICAL PROPERTIES

The data provided gives approximate values for the nominal density. Due to density variations these values can be lower than indicated above. Minimum values to calculate sandwich constructions can be provided upon request. The information contained herein is believed to be correct and to correspond to the latest state of scientific and technical knowledge. However, no warranty is made, either expressed or implied, regarding its accuracy or the results to be obtained from the use of such information. No statement is intended or should be construed as a recommendation to infringe any existing patent.
